

Territory Inbox Management SOP

Primary POM: Main focus within the inbox is Request Central request/action creation and replying to partner emails.

Secondary POM: Main focus should be working requests but should support the primary in the inbox when needed. Secondary POMs will work as the primary in the event the primary is out of office.

VSS: Should assist with partner responses. Primary and secondary should reach out to VSS for assistance when unsure how to respond to an email.

- Emails should be responded to first in, first out.
- Include the territory alias on all emails.
- Utilize the categorize function in Outlook. Any time a POM or VSS is going to work on an email, it should first be marked with their name/color to prevent multiple people working on the same thing.
- Everything that comes through the inbox should receive a response. No emails should go unanswered.
- If a POM is unsure how to respond to an email, they should reach out within the territory for assistance (The primary, The VSS, etc.) or a team lead.
- Inboxes should be “clean” with ALL emails filed into the appropriate partner folder after they have been responded to.
- Communicate within teams to ensure we are working around each other’s schedules and maintaining inbox coverage.

Email Responses:

- Understand what is needed before responding to an email. Are they asking for a quote, or do they just need a question answered? **We should only create an RC request/action if a quote is needed, questions should be answered via outlook.**
- Double check with your fellow POM’s for clarity if you’re unsure how to respond and direct pricing questions to the VSS.

Filing E-mails

- As emails come into the main territory box, the primary POM/triager should identify and move all emails from their VSS’s accounts into their VSS folder.
- As emails are replied to, they can be moved into the partner folder. If your reply requires a response from the partner, it can stay in the VSS folder for visibility.

Creating Requests

- Before creating a new request, search the Deal ID in CCW to verify the deal is in “Approved” status.
 - If the deal is **NOT** in approved status, we will not create a request. Instead, we’ll reply to the partner asking them to inform us once the deal is approved.
 - If the deal is approved, we should then search Outlook and Request Central to determine if there is already an existing request.
- If there is an existing request, new actions should be added under that request.
- New requests should be created using the Magic Button or CIS Plug In.
- Revision/refresh actions and orders should be added under the original request.
- Contacts should be looked over and “cleaned up” to avoid adding end customers.
- Orders should be added under the “Orders” tab of the original RC request.
 - Use the RC search function to find the original request (and/or any duplicates).
 - If there is no existing RC request associated with the order, submit the order using the Magic Button or CIS Plug In.
- Once a request has been created/added to workflow, a response should be sent to the partner providing them with the RC request number.
- Always add email thread and any important files for a request under the files tab.
- If for any reason we are unable to add a request to the queue (unable to view deal, deal not approved etc.) a response should be sent to the partner explaining why.

QUICK BLURBS:

APPROVAL IN PROGRESS:

We are currently unable to quote Deal ID 000 as it is in “APPROVAL IN PROGRESS” status in CCW. We cannot apply discounts when the deal is in this state. Please let us know when then deal has been approved.

For further assistance please contact your Cisco AM.

UNABLE TO VIEW DEAL:

At this time, we are unable to view Deal ID 000. Please ensure that all lines in CCW are set to TD SYNnex CORPORATION and advise when the Deal has been approved for quoting.

Should you have any questions, please feel free to contact us.
