

Territory RC Management SOP

Differences post-auto-triage in territory inbox management

Primary POM:

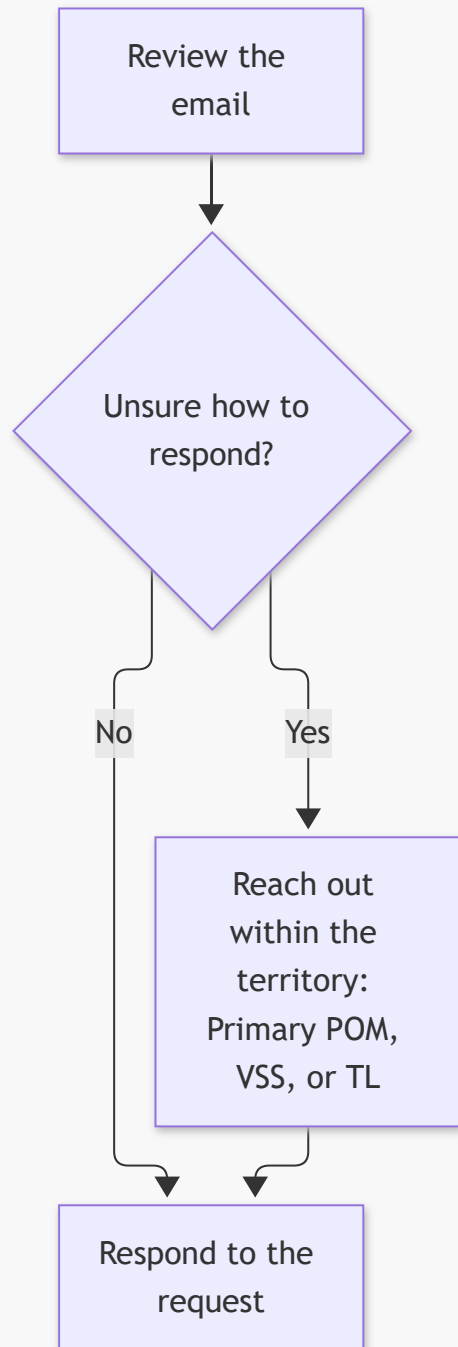

Secondary POM:

VSS:

Overall Notes

- **Requests are still responded FIFO**
- **Nothing goes unanswered**

POM Escalation Path

Validating Auto-Triage

Review the following information in the request before continuing:

- Reseller & Reseller Contact
- Action Type (order, quote, etc.)
- Notes

This information can be found in the attached .emL file

Reporting Errors

"What happens when auto-triage isn't correct?"

This still needs validation

- Reach out to the Copilot Agent and report your issue in plain language. Answer any follow-ups necessary.
 - Nothing else!
-

Working in Request Central

All requests with the "Request Creator" set to something like: `idp_request_central` are tickets that have not been assigned yet. Look for the oldest request with this creator.

1. Assign the correct person as both `Owner` and `Request Creator` for the request.
 2. Validate the information through the `.eml` attachment
 3. Begin work
-

Email Filing & Responses

Questions

- Should POMS be responding through RC Email function?
